Manager

IPM makes EVM simple!

The Problem:

Typically Earned Value Management (EVM) solutions require additional in house software tools and hardware configured to support these tools. In addition there are often additional training requirements and personnel required to manipulate these tools and perform the analysis. Even in cases where no additional personnel are demanded the time spent by existing project personnel preparing for and producing EVM reports substantially impacts the time that they can spend performing their critical project functions. Often projects find one or more of the following problems:

- Cost data does not coordinate with schedule data. For example, BCWP and ACWP entries found on finished schedule tasks.
- CAM status updates not being done on time or completely.
- CAMs not receiving SPI data until days after statusing the schedule
- ETC updates take weeks or even months.
- CAMs and senior management do not have the information that tells them which tasks are impacting what deliveries.
Travel impedes access to schedule and cost data.
- Unable to determine if subcontract deliveries are impacting deadlines
- No resource loaded schedule, so no in-depth estimate on manpower or material costs

The Solution:

IPM provides project management teams with an easy to access and understand view of their current Earned Value Management reports and status.

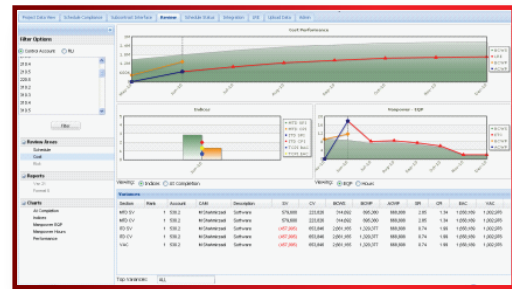

IPM requires no additional software or hardware and requires no per user licenses. Simply upload project data and access results anytime and anyplace.

OPDEC's IPM is a Web based tool that integrates resources between a project's schedule such as MS Project or FastTrack and a project's cost system such as MPM, Cobra, or other costs system. IPM functions as a service that provides complete program schedule integration including sub-contractor IMS drivers and key supplier delivery schedule data.

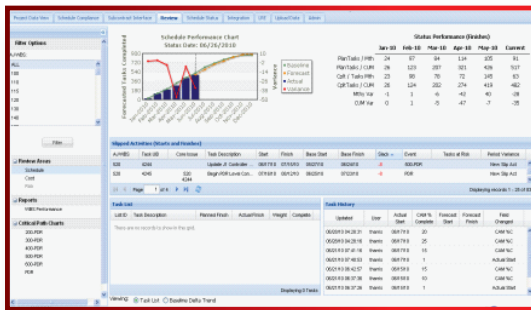

IPM enables CAMS to update and status the schedule simultaneously and remotely as well as automating the CAM status process. IPM automates the update of the IMS and automates performance from the IMS to the cost system. IPM provides online EAC Rational and an overview of all LRE Rational.

IPM focuses on PM and CAM reviews by providing a live tool that can be used to analyze issues and evaluate the impact of corrections. The tool connects task list, history and CAM activity.

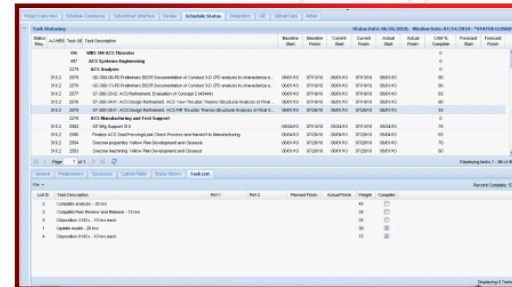

Schedule Review

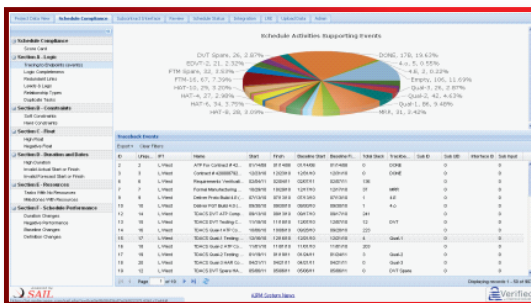

Cost Review

CAM Web Status

Schedule EVM Compliance

Latest Revised Estimate

The Benefits:

- Reduces monthly status cycle time
- Reduces PowerPoint creation exercise
- Cycle time to obtain earnings and variance data is greatly reduced
- Guarantees integration of schedule and cost data
- Eliminates need of paper trail of earning status sheets
- Enables multiple and simultaneous updating to MS Project from any location
- CAMs take control of their accounts

IPM is available as a subscription requiring only access to the Web and requires no impact on the organization's IT infrastructure.

Pricing is based per project defined as a single IMS. All project data is maintained on a secure server and encrypted during transfer. Subscription agreement and software system escrow agreement available.

EVM analysis and reports available without the additional infrastructure and personnel

Who We Are...

OPDEC is a small business that is focused on the support via products and services of Federal Government organizations and Government Industry contractors through the development and fielding of specialized program management related software applications, tools, and consulting services.

We are committed to ensure that our clients have what they need to succeed in their mission and project goals with maximum efficiency and reliability. Our team possesses the required system development, logistics, technical and programmatic support skills in all areas of a system life cycle. Many of our information applications are mission critical, so we give our clients the assurance that we will be there when they need us.
